Processing

The processing and material temperature should be between 68-77°F (20-25°C).

FM-7004 can be dispensed using drill mixing methods. It is recommended that a drill mixer be used to minimize large air bubble formation and keep the cell structure small and uniform. If hand mixing without a drill mixer, the cell structure at the surface will be porous. If pigment has been added to the hardener component, it will separate during storage.

Agitate the hardener and resin before use to ensure that the formula is homogeneous.

Packaging		
FM-7004 Quart Kit	3.76 lbs.	
FM-7004 1 Gal. Kit	15.04 lbs.	
FM-7004 5 Gal. Kit	75.2 lbs.	
FM-7004 Drum Kit	846 lbs.	

Storage

Original containers should be kept tightly sealed and stored at ambient temperatures 59-86°F (15°C to 30°C). If properly stored the products have the shelf-life indicated on the product label.

Partly used containers should always be sealed appropriately and used up as soon as possible.

Handling Precautions

Good workplace ventilation is to be ensured during processing. At the same time, the employer's liability insurance association's industrial hygiene safety regulations regarding the handling of reaction resins and their hardeners are to be observed. Please take heed of the appropriate safety data sheets.
