Key Properties

- Excellent physical properties after PC cure
- Free of mercury, MOCA or TDI
- Excellent U.V. stability
- Specially formulated for castings into either tin or platinum silicone molds

Applications

- For room temperature hand-batch or vacuum assisted casting methods

Processing

The processing and material temperature should be between 68-77°F (20-25°C).

For best results, de-air the material prior to casting, then pressurize to 60 psi until cured. However, if pressure cannot be used, this material has been designed for vacuum degas only. OC-5246 can be easily buffed when cured.

Packaging

OC-5246 Quart Kit	3.24 lbs.
OC-5246 1 Gal. Kit	12.96 lbs.
OC-5246 5 Gal. Kit	64.8 lbs.
OC-5246 Drum Kit	729 lbs.

Storage

Original containers should be kept tightly sealed and stored at ambient temperatures 59-86°F (15°C to 30°C). If properly stored the products have the shelf-life indicated on the product label.

Partly used containers should always be sealed appropriately and used up as soon as possible.

Handling Precautions

Good workplace ventilation is to be ensured during processing. At the same time, the employer's liability insurance association's industrial hygiene safety regulations regarding the handling of reaction resins and their hardeners are to be observed. Please take heed of the appropriate safety data sheets.
